There are over 143.6 million country code domain registrations in 2017. It’s not just countries that have domains! There are an increasing number of local domain registrations, as in base names, e.g. csv or .iso.

A 2017 report by Nominet revealed the most popular domain extensions. .uk, .de, .fr, and .us are the most popular domain extensions, with .uk leading the pack. .uk has 3.1 million registrations, .de has 16.1 million, .fr has 15.8 million, and .us has 10.6 million.

One of the reasons for the popularity of these domain extensions is that they are well-known and easy to remember. The .uk domain is particularly popular in the United Kingdom, where it is used as a standard way to indicate a website is a UK company.

The online world is constantly evolving, and as new technologies emerge, so too do new domain extensions. The .io extension, for example, has gained popularity among technology and startup companies.

In conclusion, the online world is vast and ever-changing, with millions of domain registrations made each year. Understanding the different domain extensions and their uses is crucial for anyone involved in internet marketing or website development.

Did you know?

- The most popular city domain is .berlin. The most popular country domain is .us.
- Mexico has the most domain registrations with 822,968.
