Data Quality Policy

Introduction

Improving and maintaining the quality of the data on the register for .uk domain names is a key objective for Nominet. We have, and will continue to take steps to achieve this objective, and believe that registrars play a key role in assisting us in doing so. This Data Quality Policy sets out some of the ways we expect registrars to help us improve our data quality.

NB terms that have been capitalised in this document have the meaning set out in the “Definitions” section at the end of this Policy.

Data Quality Policy Statement

Registrars must submit Complete and accurate data in their transactions with us.

Registrars must ensure that a reasonable, minimum proportion of the data they submit to us can be Validated by us.

All registrars must be satisfied that the email address for the registrant is a reliable means by which to contact the registrant.

Incomplete Data

Where data submitted by a registrar is Incomplete, it will not be accepted by our systems and the relevant transaction submitted by the registrar will be rejected in real time.

Data Validation

We shall regularly notify each Registrar of the minimum proportion of Valid data applicable to them, and work with Registrars to identify steps that they can take to meet this requirement. The threshold will be set and adjusted with reference to objective criteria, including without limitation: the length of time that the Registrar has used the Tag in question; the market and customer-base predominantly served by the Registrar; and the geographic makeup of their customer base.

Nominet may Validate any registrant data submitted to us. Where Nominet determines that data submitted cannot be Validated, registrars will be required to take steps to resolve the issue. These requirements are:

For domains on Accredited Channel Partner Tags

The registrar must take appropriate steps in order to allow it to confirm to Nominet that the data is Valid. For example the registrar may choose: to ask the registrant to provide corrected data; to confirm that the data is reliable based on its own knowledge or information from a trustworthy third party
source; or, to obtain documentary evidence that the data is reliable such as a utility bill or similar document.

Registrars must suspend domain names within 30 days where they are unable to Validate data.

*For domains on Channel Partner and Self-Managed Tags*

Where data relating to domain names on tags of these types could not be Validated by us, we will contact the registrant directly in order to allow corrected data or documentary evidence to be provided to us by the registrant. Contact details for domain names which cannot be confirmed as Validated within 30 days of the date of submission of the data will be suspended.

*Accredited Channel Partner Tags – Processes and Auditing*

Registrars using Accredited Channel Partner Tags must document the processes that they put in place in order to meet their obligations under the Data Quality Policy Statement. These written processes will constitute the Data Quality processes required under paragraph E.1.4 of Schedule 1 of the Registrar Agreement.

Nominet will monitor a registrar’s compliance with its own processes through its data quality audits of registrars and the regular data quality reports that registrars using Accredited Channel Partner Tags must submit to Nominet.

*Updating this policy*

Nominet will review this policy on a regular basis in order to ensure that it continues to reflect best practice and current practices within the industry. We may update this policy by providing all registrars with at least 30 days notice and posting the new policy on our website.

*Definitions*

“Complete” means that data complies with the format requirements set out in the annex to this policy applicable to the type of data in question;

“Incomplete” means data that is not Complete; and,

“Validate” means confirming that data is reliable by comparing it to data provided by a trustworthy source (which may be a third party database), and “Valid” and “Validated” shall be understood accordingly.
Annex

Section 1 – UK Address Format

Valid address meeting following requirements

1.1 Street 1 contains non-numeric information (not just number)
1.2 Post Town
1.3 Country
1.4 Post Code for UK
1.5 Post Code is not applicable for other countries
