# #WorldBackupDay

Top tips for protecting your files

## #DataProtection

- Check that you can restore your files from your backup
- Regularly update your backups
- Cloud storage is a great backup solution, but use 2FA to further protect it

## #CyberAware

- Ensure backups are just as secure as original data
- Encrypting files provides another layer of defence
- Make sure backups are physically secure

## The '3-2-1' Rule

Keep **3** copies of your backup copies

Store **2** backup copies on different storage media

Keep at least **1** backup copy offsite
